***Election/Restrictions***

Upon further consideration, the restriction to one of the following inventions is required under 35 U.S.C. 121 because:

I. Claims 1-22 and 31-32 are drawn to a subcombination of a brick, classified in class 52, subclass 591.5.

II. Claims 23-30 and 33-35 are drawn to a combination of a wall system, which including a fastening element, classified in class 52, subclass 586.1.

The inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combination (MPEP 806©). In the instant case, the subcombination as claimed does not require the particular of the combination as claimed for a fastening element because the brick itself already has connecting elements such groove and projection.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purpose as indicated is proper.

A telephone call was made to request an oral election on 2/9/2009, but did not result in an election being made.
